

Art Morrish
DARPATECH 2004
Closing Remarks

Thank you, Brad. I hope that these presentations have been able to show you just how excited we are about the technologies and programs that we are working on at TTO. It's not hard to find the motivation to push harder and seek out the best solutions to today's toughest tactical problems. Every night on the television and every morning on the front pages of our newspapers we see real world situations where our past projects are making a difference. Likewise, we envision the ways that our current programs and future technologies can save lives and win battles. As you visit our booth today, speak with our program managers about the problems that they are facing and discuss some of your potential solutions. This is what keeps us up late at night trying to find new and creative ways to help our brave soldiers survive, succeed, and accomplish their missions in the toughest of environments. I invite you all to send in your ideas in support of TTO thrust areas by responding to some of our open BAA's such as: BAA 04-04, Innovative Tactical Technologies and our most recent BAA on Transformational Urban Warfare. Thank you again for your time and your continued support; you are truly the lifeblood of our organization!
